

Fabrikam Service Insights & Automation Platform

Milestone 4 – Solution Design Document.

Name: Pranjali Jadhav

Problem Summary:

Fabrikam Consulting currently lacks real-time operational visibility into case management.

Leadership cannot track SLA performance trends or predict operational bottlenecks.

SLA breaches are detected late, increasing customer dissatisfaction.

Attachments stored in CRM increase storage cost.

Data Source Design:

Primary Data Source: SQL Database (Cases Table)

Columns:

- 1) CaseID
- 2) CreatedDate
- 3) ClosedDate
- 4) Priority
- 5) Status
- 6) SLAStatus
- 7) ResolutionTime

Parameters

Data filter (CreateDate)

Priority filter

Status filter

Justification:

A tabular layout provides operational clarity for support teams.

Parameterized filtering enables dynamic analysis without complex architecture.

Management Analytics Dashboard:

- 1) Total Cases
- 2) SLA Breach Percentage
- 3) Average Resolution Time.

Observations:

40% of cases breached SLA, indicating operational inefficiency.

Average resolution time is 3.8 days.

SLA breaches represents a significant proportion of total cases.

Leadership requires proactive monitoring to reduce breach rate.

Workflow Steps:

- 1) Case updated
- 2) Check SLA status
- 3) If breached
- 4) Send email notification to manager
- 5) Log alert.

Limitations :

No predictive AI included.

Small sample dataset used for demonstration .

Real-time streaming not implemented.
